Index of Computer Programs  
and  
Facilities Documentation at TUCC

**A. Introduction**

This index is a list of available programs, subprograms, subroutines, subprocedures, and packages, indexed by name and by subject. Each entry shows a brief description, an abstract number, and a document number.

**B. Using the Index**

Entries appear alphabetically and include both program entries and subject entries. Subject entries are followed by program entries. Each program entry includes program name, short description, abstract number, and document number; for programs that are part of a package, the name of the package is given.

Here is a sample entry. Each part is discussed below.

name	description	abstract	document
↓	↓	↓	↓
TPVOLCPY - A Tape Copying Program		004.	LS-291

**1. Program Name**

The program name is a short mnemonic that refers to the available computer program. Programs are listed both alphabetically according to these mnemonics and under the subject headings that describe them. For example, TPVOLCPY, a tape copying program, can be found under TPVOLCPY, COPY, TAPE HANDLING, and UTILITY PROGRAMS.

**2. Short Description**

This includes the name of the package program, if applicable, in parentheses, and a short description of the program.

**3. Abstract Number**

This number in the index corresponds to the number of an abstract. Abstract listings are available for reference use at local campus computation centers. To print the abstract listing, use the following Job Control Language:

```
//jobname JOB xxx.yyy.zzz,username,TIME=1,...
```

```
/*JOBPARM LINES=12
```

```
// EXEC SCRIPT,LIB='TUCIS.ABSTRACT.TEXT'
```

```
//SYSIN DD DSN=TUCIS.ABSTRACT.TEXT(CONTROL),DISP=SHR
```

The printout will require about 250 pages. You may need other JCL parameters to request a lowercase print train at your installation; see your user services if you aren't sure how to specify this.

#### 4. Listing Abstracts

Under TSO, you can use the ABSTRACT CLIST to display abstracts on your terminal. Just type "ABSTRACT" followed by the number of the abstract you want to see. For example:

ABSTRACT 138

would list the abstract for the SAS base product.

#### 5. Documentation

##### a. TUCC Documents

There are two series of TUCC documents for users: the LS and GI series. Each of these designations may be suffixed by the letter "R" (i.e., LSR or GIR). The "R" indicates that one or more TUCC campuses may restrict distribution of the document, generally because of document cost or the specialized nature of the information. Procedures for acquiring "R" documents are announced by each campus computation center to its users.

LS and GI documents without the "R" suffix are usually available from local computation centers. The content of the documentation series is as follows:

LS - Computer program user documentation; how to use the program on the TUCC system.

GI - General information to facilitate the use of TUCC services; tutorials.

In many cases, the TUCC document is not the primary user documentation for a program or package; it serves only as an announcement that the software is available on the TUCC system, tells how to access it, and tells where to get complete documentation. This is often true for software that has been acquired outside the TUCC community.

The latest "List of Current TUCC Documentation" gives a listing, in document number order, of all current documents and their updates. It is published quarterly as an update to this index.

b. UNC Educational Computing Service Documents

UNC-ECS's TUCC-related documentation is in the LIB-ECS series. Reference copies of UNC-ECS documents are available at most local computation centers, and personal copies may be ordered through the local centers.

c. Other Documentation

For programs that have neither TUCC nor UNC-ECS documentation, the index will refer to one of the notes below. For documentation in this category, consult your local user services concerning the availability on your campus.

Note 1 IBM Report Program Generator (RPG) Programmer's Guide, GC24-3374

Note 2 Programming Guide (PG): available from UNC-CH Computation Center

Note 3 Documentation available from UNC-CH Department of Biostatistics

Note 4 IBM ANSI COBOL Manual, GC28-6396

Note 5 IBM Services Aids Manual, GC28-0674

Note 6 IBM Utilities Manual, GC26-3902

Note 7 Documentation available from Institute for Research in Social Science (IRSS), UNC-CH

Note 8 "Applications of SPITBOL," available from NCSU Student Supply Store

Note 9 Self-documenting: list program for documentation or see cataloged procedures listings available at your local computation center

Note 10 IBM APL2 Programming: Guide, SH20-9216, and IBM APL2 Programming: Language Reference, SH20-9227

Note 11 IBM OS/VС DOS/VС VM/370 Assembler Language, GC33-4010

Note 12 IBM VM/SP CMS Users' Guide, SC19-6210, and IBM VM/SP CMS Command and Macro Reference, SC19-6209

### C. Package and System Abbreviations

Many of the items listed in the index are subroutines, commands, or other parts of a package of programs or an interactive system. In such a case, an abbreviated name of the package or system is listed in the index entry, for example:

FREQ (SAS) Frequency and Crosstabulation Tables

indicates that FREQ is a procedure within the SAS package. The following is a list of most of the package and system abbreviations, with an extended title or description and the documentation that describes them.

<u>ABBREVIATION</u>	<u>PACKAGE</u>
APL STATPACK2	STATPACK2 package for APL programs. TUCC Document LS-114.
BERRY-WHYBAK	Berry-Whybark package for operations and logistics management. UNC-ECS Document LIB-ECS-40.
BMDP	Biomedical Computer Programs. TUCC Document LS-308.
CMS	Conversational Monitor System of the VM Operating System. TUCC Document GI-092 and IBM manuals (see Note 12 above).
EISPACK	An Eigensystem Subroutine Package. TUCC Document LS-286.
HARRIS-MAGGARD	Harris-Maggard management analysis package. UNC-ECS Document LIB-ECS-39.
JCP	Johnson Chemistry Package. UNC-ECS Document LIB-ECS-50.
ICES/360	Integrated Civil Engineering System. TUCC Document LS-44.
IMSL	International Mathematical and Statistical Library. TUCC Document LS-287.
LERNER	Lerner Finance Simulation Cases. UNC-ECS Document LIB-ECS-47.
LINPACK	Subroutine Library for Linear Algebra. TUCC Document LS-358.
PL/I SPC	PL/I Subprocedure Collection. TUCC Document LSR-347.

SAS	Statistical Analysis System. TUCC Document LS-118. (Other SAS Institute products are also documented in LS-118. SAS is a trademark of SAS Institute, Inc.)
SPSS-X	Statistical Package for the Social Sciences. TUCC Document LS-102. (SPSS-X is a trademark of SPSS, Inc.)
TSL	UNC-CH Biostatistics Time-Sharing Library. Documentation is available from the UNC-CH Department of Biostatistics.
TSO	Time Sharing Option of OS/VS2 MVS. TUCC Document LSR-352.
WYLBUR	OBS WYLBUR Interactive System. TUCC Document LSR-360.
